

Connexion Announces Energy Efficiency Incentives from ComEd, Nicor Gas and Illinois DCEO Are Now Available in One ‘Quick Guide’ Publication

This downloadable guide enables fast and easy navigation of the key energy efficiency incentives for businesses and municipalities.

Buffalo Grove, IL ([PRWEB](#)) July 15, 2013 -- [Connexion](#), a leading provider of electrical and energy solutions to the construction trades, commercial businesses and municipalities has announced the release of their 2013-14 Energy Incentive Quick Guide.

“With so many facilities now ready to explore the next levels of energy savings beyond lighting retrofits and upgrades, our Quick Guide eliminates the arduous task of researching through multiple publications for available incentives for these more complex measures,” said Connexion’s Vice President of Energy Services, Brian Earl.” Even though our clients have come to depend on us for our knowledge of incentives and other sources of funding, there are still many who prefer in-house access to this information to comply with their sustainability directives. This guide fulfills that need.”

In the Midwest, the energy incentive landscape continues its rapid evolution with the addition of higher LED lighting incentives, increased incentives for lighting controls and an expansive menu of new incentives for HVAC, refrigeration, school and healthcare laboratory measures, and much more.

Connexion’s Energy Incentive Quick Guide was created to provide a building owner or chief sustainability officer a quick means of calculating the viability of an energy conservation measure based solely upon available incentives. This consolidation of incentives and utility rebates lessens the likelihood of overlooking key incentives that may have a profound impact on a project’s return on investment.

Connexion, a top-rated Trade Ally with ComEd, Nicor Gas and the Illinois DCEO employs an energy team whose members each specialize in a particular technology and vertical market. These technologies include; lighting systems, control and building automation, engineered clean energy solutions and combined heat and power systems. Included within their vertical market expertise are healthcare and educational facilities, industrials, data centers, property management firms and dedicated solutions for small businesses.

The [Energy Incentive Quick Guide](#) is one of several guides available for free download. Other popular guides include their award winning [T12 Upgrade Guide](#) and the [EISA Lamp Availability Guide](#).
